

## Press release

### Absolent introduces A·erity Compact: A high-performance filter unit in a compact design

**Lidköping, Sweden – October 2024** – Absolent is pleased to announce the release of a new product in the A·erity series. The new A·erity Compact features a smaller and more compact design while maintaining the same world-class air filtration capabilities. Three compact filter units are available, offering airflows from 500 to 1,000 cubic meters per hour and particle load capacities from 10 to 30 milligrams per cubic meter. These units are well-suited for use in confined spaces, particularly in applications such as machining, grinding, and MQL.

The A·erity Compact assists organizations in achieving their sustainability objectives by reducing energy costs and carbon footprint. The product has been designed to operate at peak efficiency, requiring minimal energy input and is particularly well-suited to applications with low particle loads.

In light of the growing awareness and understanding of the detrimental effects of airborne pollution on human health, Absolent has developed the A·erity concept to provide a safer working environment for both people and machinery. The A·erity is equipped with an EcoDrive and an IE5 class EC motor, which enables optimized energy consumption and safer operation. The EcoDrive operates at the optimal speed, saving energy and ensuring a smooth, safe, and highly energy-efficient air filtration process.
